

DevOps Engineer

Name: Rakshith R Poojary

Email: poojaryrakshith986@gmail.com

Mobile: +91-6360312738

PROFESSIONAL SUMMARY

DevOps Engineer with 3+ years of experience in designing and implementing CI/CD pipelines, Kubernetes deployments (EKS), and AWS cloud infrastructure automation. Skilled in GitOps using ArgoCD, progressive delivery with Argo Rollouts, and infrastructure provisioning using Terraform modules. Strong experience in containerization, monitoring, cost optimization, and secure secrets management. Proven ability to improve deployment reliability, reduce cloud costs, and automate end-to-end DevOps workflows.

TECHNICAL SKILL SHEET

Version Control Tool System	GIT, GitHub
Containerization and Orchestration	Docker, Kubernetes (EKS), Helm, ArgoCD
CI/CD	Jenkins
Configuration management Tool	Ansible
Build Tools	Maven
Scripting	Python
Operating Systems	Windows, Linux
Infrastructure as Code	Terraform
Cloud Platforms	AWS, Azure, GCP
Code Quality and Security	SonarQube, Trivy
Monitoring and Logging	Prometheus, Grafana, EFK Stack, CloudWatch, Slack Alerts

PROFESSIONAL EXPERIENCE

Capgemini technology services India limited

Feb 2023 to present.

Key Contributions:

- Designed and implemented end-to-end CI/CD pipelines using Jenkins, reducing deployment time by 60% and improving release frequency from weekly to daily.
- Containerized applications using Docker and deployed microservices to Amazon EKS using ArgoCD (GitOps model).

DevOps Engineer

- Implemented Argo Rollouts for canary and blue-green deployment strategies to ensure zero-downtime releases.
- Provisioned AWS infrastructure (EC2, VPC, IAM, ALB, S3) using modular Terraform architecture.
- Configured remote Terraform backend using S3 and DynamoDB for state management and locking.
- Implemented secure secret management using AWS Secrets Manager and mounted secrets into Kubernetes pods.
- Developed automation scripts to stop/start non-production EC2 instances, reducing AWS infrastructure costs by 20%.
- Identified and removed unused EBS volumes and unattached Elastic IPs, optimizing AWS expenditure.
- Configured monitoring and alerting using Prometheus and Grafana dashboards.
- Implemented centralized logging using EFK stack and integrated alerts with Slack.
- Set up Jenkins master-slave architecture for distributed and parallel builds.
- Automated Helm-based deployments with environment-specific values configuration.

EDUCATIONAL QUALIFICATION

B.E, Visvesvaraya Technological University Completed BE in Electronics and Communications Engineering in 2022

ORGANIZATIONAL EXPERIENCE

Project 1:

Client	: Jenny Craig
Role	: DevOps Engineer
Tools/Environment	: AWS, GIT, Ansible, Jenkins, Git hub, ArgoCd, Maven, Docker, Linux, Terraform, Prometheus, Grafana. EFK stack, Slack

Responsibilities:

- Worked with scripting language like Python.
- Created Docker files and build images and push to the Docker private registry
- Designed and implemented end-to-end CI/CD pipelines using Jenkins, integrating SonarQube for code quality checks and Trivy for container vulnerability scanning.
- Containerizing applications with Docker. Responsible for managing the Docker private registry.

DevOps Engineer

- Deployed microservices to Amazon EKS using Argo CD (GitOps) approach, reducing manual deployment effort by 70%.
- Implemented rolling updates and blue-green deployment strategies to ensure zero-downtime releases.
- Configured CloudWatch monitoring, log groups, alarms, and SNS notifications for production workloads.
- Integrated Prometheus and Grafana for monitoring Kubernetes cluster health and application metrics
- Implemented centralized logging using Splunk for infrastructure and application logs.
- Involved in Installing Jenkins on a Linux machine and creating a master and slave configuration to implement multiple parallel builds through a build farm.
- Managed infrastructure automation using Terraform.

Project 2:

Project : Avis Budget Group.
Client : ACS, Atlanta.
Role : DevOps Engineer
Tools/Environment : AWS, GIT, Ansible, Jenkins, Git hub, ArgoCd, Maven, Docker, Linux, Terraform, Prometheus, Grafana. EFK stack, Slack.

Responsibilities:

- Configured Jenkins jobs with Git and Maven for generating artifacts.
- Implemented secure secret management using AWS Secrets Manager and integrated secrets into Kubernetes workloads via volume mounts.
- Implemented Argo Rollouts to enable canary and blue-green deployments strategies, reducing production deployment failures by 30%.
- Developed cost optimization automation scripts using AWS CLI to stop/start non-production EC2 instances.
- Identified and removed unused EBS volumes and unattached Elastic IPs, reducing unnecessary AWS spending.
